

Where the Conversion Leaks Are

allbirds.com · CRO Recommendations · August 2026

The site's primary conversion mechanism is guiding visitors from the hero to a single, clear product or category, but the hero's dual CTAs and vague copy dilute that focus, while hidden shipping costs and lack of social proof further erode trust and increase friction.

How to read this

Findings marked **verified** were measured directly and are reproducible. Everything else is a hypothesis derived from inspecting the live pages, which is why the PXL evidence questions score zero for those items. Sized opportunities describe the prize if a change works, not expected revenue: roughly 10–30% of A/B tests produce a significant win, and winners tend to overstate their true effect.
